A checked Lean declaration

```
def hello : String := "Hello from Lean!"
```

Hover over a name to inspect its type and documentation.

A multiline proof

```
theorem identity_pair (p q : Prop) :
    (p → p) ∧ (q → q) := by
  constructor
  all_goals
    intro h
    exact h
```

Hover over a bubble to inspect the proof state.

A proof state

```
case left
p : Prop
q : Prop
⊢ p → p

case right
p : Prop
q : Prop
⊢ q → q
```

A Lean command

```
#check Demo.identity_pair
```

```
Demo.identity_pair (p q : Prop) : (p → p) ∧ (q → q)
```

```
#eval (2 + 2)
```

```
4
```
